LingTube

YouTube subtitle translation and AI dubbing extension with bilingual captions, transcription, and voice read-aloud.

About

LingTube is a YouTube subtitle translator that turns foreign-language videos into bilingual, readable audio experiences. It adds translation, transcription, dubbing, and voice read-aloud on supported video sites so you can follow along without constantly staring at captions.

What is LingTube

LingTube is a YouTube subtitle translator and voice extension built for watching videos in languages you do not fully understand. It translates subtitles, can recognize speech when captions are missing, and then presents the result as bilingual captions or voice

output. The app is listed in the Chrome Web Store as **LingTube - YouTube Subtitle Translator & Voice**, and it is designed for quick, one-click use on supported pages.

Unlike a basic subtitle overlay, LingTube combines several language tools in one YouTube subtitle translator workflow:

- subtitle translation for captioned videos
- speech recognition for no-caption videos
- AI dubbing and read-aloud playback
- bilingual or translation-only caption display
- video summarization after translation is ready

The extension is positioned for viewers who want to understand long-form video faster, not just read subtitles line by line. Its own description calls out lessons, technical tutorials, podcasts, news, anime, movie clips, and commute viewing as common use cases.

Key features

LingTube focuses on practical translation features rather than editing tools. As a YouTube subtitle translator, it includes:

- **Bilingual captions:** show the original text and the translation together, or switch to translation-only or original-only modes.
- **Speech translation for no-caption videos:** if a video has no subtitles, LingTube can convert speech to text first and then translate it.
- **AI dubbing and read-aloud:** translated text can be spoken through Edge TTS or browser voices.
- **Audio mixing controls:** original audio and translated voice can play together, with separate volume control.
- **One-click start and stop:** the extension is meant to be launched quickly while a video is open.
- **Hotkey support:** Alt+Shift+V is listed as a shortcut.
- **Context-aware translation:** it supports Google Translate and OpenAI-compatible APIs

- **AI learning tools:** the app can generate vocabulary, grammar, exercises, scoring, and review content.
- **Video summary mode:** after AI is ready, it can summarize translated subtitles and dialogue, extract key points, explain technical terms, and surface timestamps.

These features make LingTube more than a subtitle translator. It is also an AI-assisted YouTube subtitle translator for study, comprehension, and faster review.

How to use it

Using LingTube is straightforward, because the extension is designed to start from the video page itself.

- Install the Chrome extension from the Chrome Web Store.
- Open a supported video page such as YouTube, Coursera, Udemy, Bilibili.tv, or TikTok.
- Start LingTube with one click or use the Alt+Shift+V hotkey.
- Choose whether you want bilingual captions, translation-only captions, or voice read-aloud.
- If the video has no captions, let the app recognize speech first and then translate it.
- Optionally connect the translation service you want to use, including Google Translate or an OpenAI-compatible API.
- Use the audio controls if you want to keep original sound and translated voice together.
- If you need a quick recap, let the AI summary feature process the translated dialogue and subtitles.

Because LingTube works inside the page, the YouTube subtitle translator flow is best when you want immediate understanding rather than a separate transcript editor.

Who it is for

LingTube is useful for anyone who regularly watches foreign-language video and wants a YouTube subtitle translator that also speaks the translation aloud.

- language learners who want bilingual captions and review exercises
- students taking online courses on YouTube, Coursera, or Udemy
- viewers of technical tutorials who need clearer context for long sentences
- people watching news, podcasts, anime, or movie clips in another language
- commuters who prefer voice read-aloud instead of constant subtitle reading

It is especially helpful when a video has dense terminology or when you want to skim a long lesson by summary and timestamps. If your workflow revolves around watching, listening, and understanding quickly, this YouTube subtitle translator is aimed at that exact job.

What to know before you use it

LingTube is powerful, but it is not a perfect substitute for native subtitles or official translations. The extension can translate speech and captions, yet accuracy still depends on the source audio, the quality of existing subtitles, and the translation service you choose. Long, technical, or slang-heavy content may still need manual checking.

A few practical caveats matter:

- It runs only on the pages the developer lists: YouTube, Coursera, Udemy, Bilibili.tv, and TikTok.
- Settings are saved locally in your browser.
- Subtitle, translation, and voice requests are sent only to the services you enable.
- The Chrome Web Store listing shows 4.6 stars from 26 ratings and about 1,000 users, so the install base appears modest.
- The extension lists support for 48 languages, but the exact output quality can vary by language pair and the API or voice engine selected.

For official captions, course transcripts, or legal/medical information, use the publisher's own transcript or a trusted source instead of relying only on a YouTube subtitle translator. LingTube is best when you want fast understanding, bilingual captions, and AI dubbing in one browser extension, but you should still verify critical details before treating the translation as final.
